Summary

Cloud DevOps Engineer with hands-on experience in AWS, Kubernetes, Docker, Terraform, GitHub Actions, Jenkins, ArgoCD, and Helm. Skilled in designing and deploying cloud-native applications, building automated CI/CD pipelines, and managing Infrastructure as Code (IaC) for scalable and reliable environments. Experienced in container orchestration on AWS EKS, GitOps-based deployments, Linux administration, and cloud monitoring using CloudWatch, Prometheus, and Grafana. Passionate about automation, cloud technologies, and delivering secure, high-performance solutions in modern DevOps environments.

Education

Dr. Ambedkar Marathwada University **June 2026**
Bachelor of Computer Application (BCA) | 68.7% *Jalna, Maharashtra*

Maharashtra State Board of Secondary & Higher Secondary Education **Feb 2023**
Higher Secondary Certificate | 56.17% *Pune, Maharashtra*

Maharashtra State Board of Secondary & Higher Secondary Education **April 2021**
Secondary School Certificate | 85.80% *Pune, Maharashtra*

Projects

Cloud-native-ecommarce-app [GitHub](#) | *Docker, Kubernetes, AWS EKS, ArgoCD, Helm, RDS* **May 2026**

- Architected and deployed a production-grade microservices application on Kubernetes (AWS EKS) using Deployments, Services, and Ingress Controllers managing 5+ independent services with zero-downtime rollouts.
- Built end-to-end CI/CD pipelines using GitHub Actions reducing release cycle time by approximately 60%.
- Managed deployments with Helm charts across development, staging, and production environments.
- Automated deployment workflows reducing manual effort by 70% and improving release consistency.

AWS Infrastructure with Terraform [GitHub](#) | *Terraform, AWS VPC, EC2, RDS, ALB, Auto Scaling* **July 2026**

- Designed and provisioned a highly available AWS environment using Terraform, including a multi-AZ VPC with 2 public and 2 private subnets, an Internet Gateway, and a NAT Gateway.
- Deployed an Application Load Balancer with a target-tracking Auto Scaling Group of EC2 instances to handle variable traffic loads across multiple availability zones.
- Provisioned a private RDS MySQL instance with security groups enforcing least-privilege access, isolating the database from direct internet exposure.

AWS Monitoring Stack [GitHub](#) | *AWS EC2, RDS, ALB, CloudWatch, SNS, Prometheus, Grafana, Docker* **July 2026**

- Monitored AWS infrastructure including EC2, RDS, Application Load Balancer, Lambda, and EKS to ensure system reliability and uptime.
- Configured CloudWatch alarms to detect high CPU usage, low database storage, and server (5xx) errors in real time.
- Set up SNS email notifications to alert on critical issues such as instance downtime and threshold breaches.
- Built interactive Grafana dashboards using Prometheus to visualize infrastructure health and performance metrics.
- Improved incident response time by enabling proactive alerts instead of manual monitoring.

Technical Skills

Cloud Platforms: AWS (EC2, S3, RDS, IAM, VPC, CloudWatch, CloudFormation)

Containerization & Orchestration: Docker, Kubernetes, AWS EKS, Helm, ArgoCD

CI/CD & Automation: Jenkins, GitHub Actions, GitOps

Infrastructure as Code: Terraform, AWS CloudFormation ansible

Version Control: Git, GitHub, Pull Requests, Code Reviews

Monitoring: AWS CloudWatch, Prometheus, Grafana

Operating Systems: Linux Administration, Networking, File Systems, Process Management

Programming: Shell Scripting

Certifications

HackFest
